

**IN THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-19 (Canceled)

20. (New) Method of manufacturing a laminate comprising a first flexible carrier layer, a second light-active layer and a third flexible magnetic layer wherein the light-active second layer is a reflective layer having signaling properties and acts without external energizing to change the properties of incident light, and the size and shape of the flexible carrier first layer, the light-active second layer, and the flexible permanent magnetic layer are the same; the method comprising the steps of:

- a) providing a magnetizable layer,
- b) forming a pre-laminate comprising the second light-active layer, a first thermally-activated glue layer, the first flexible carrier layer, a second thermally-activated glue layer, and the magnetizable layer;
- c) permanently connecting the second light-active layer to one side of the first layer and the third magnetizable layer to the other side of the first layer by heating the pre-laminate in a heating device to activate the glue layers, carrying the pre-laminate through pressure rollers, and magnetizing the magnetizable layer.

21. (New) The method of claim 20 wherein the laminate is an elongate strip.

22. (New) The method of claim 20 wherein the second layer has a pattern of light-active zones.

23. (New) The method of claim 20 wherein the first layer comprises a textile fabric or non-woven material.

24. (New) The method of claim 20 wherein the second layer is photo luminescent.

25. (New) The method of claim 20 wherein the second layer is diffusely light-reflecting.
26. (New) The method of claim 20 wherein the second layer has at least one color, or a pattern of contrasting colors.
27. (New) The method of claim 20 further comprising providing an edge without permanent magnetization.
28. (New) The method of claim 20 wherein the magnetization of the flexible permanent magnetic layer has an anisotropic character.
29. (New) The method of claim 20 further comprising providing an aerodynamic edge tapering toward the end of the laminate.
30. (New) The method of claim 20 wherein the laminate is an elongate strip, the shape of a road sign, or a warning triangle.
31. (New) The method of claim 30 wherein one end of the laminate can be clampingly secured between a door or a window of a vehicle with or without a widened portion.
